

AxonHook

AxonHook – A precise, powerful and rugged electric hook offering maximum versatility and independence in everyday life

With the new AxonHook, Michelangelo users are free to choose. In addition to the Michelangelo Hand, the AxonHook is designed to meet the performance needs of the most demanding wearers by increasing the number of functional work tasks available. Transradial and transhumeral patients can now benefit from the Michelangelo Hand as well as the powerful and rugged AxonHook. This is the perfect combination of terminal devices required for everyday tasks.

The AxonWrist (included) allows users to easily swap between the Michelangelo Hand and the AxonHook. All wrist functionality of the Michelangelo Hand is implemented into the AxonHook. This allows users to choose the most appropriate terminal device for maximum versatility and independence in everyday life. Combined with the AxonRotation or even with the AxonArm Ergo for TH fittings, it will be the preferred choice of the highly active prosthetic wearer.

Features/User benefits

Feature	User benefits
Slim and compact design of the AxonHook	High degree of visual feedback and fine proportional control
Easy exchange between Michelangelo Hand and AxonHook	Increasing the number of functional work tasks for the user in ADL
